Southwest Badger RC&D  
150 W Alona Ln.  
Lancaster, WI 53813

Many landowners are realizing that without some protection for their trees, all their site preparation, time spent planting and weed control efforts may end up in failure.

Tree and shrub shelters are among the most highly effective tools for protection against deer browse and other factors.

**Other Benefits**

- Shields trees and shrubs from severe weather
- Protects trees from mowing, weed eaters and herbicides
- Fosters increased tree growth
- Promotes tree straightness

**Southwest Badger RC&D**

Your conservation partner

The sale of reforestation aids support Southwest Badger's mission to implement natural resource conservation, managed growth and sustainable rural economic development.

**Miracle Tube**

Optimizing plant growth requires balancing protection criteria with design attributes. Miracle Tube designs have an ivory color to prevent the absorption and retention of excessive heat. This protector also has the right amount of translucency to admit the proper amount of light and contains the perfect amount of holes throughout the system. This concept allows the ideal amount of fresh air to circulate throughout the tube.

Miracle Tube

- Solid tubes furnished in nested groups of five units
- Sturdy, vented shelters available in 2 ft., 3 ft., 4 ft. and 5 ft. sizes (stakes sold separately)
- Diameters range from 3 1/2 to 4 1/4 inches
- Has rolled top to eliminate limb damage

Shrub Protector

- Furnished flat and formed into tubes
- Opens to 3 5/8 inch diameter when installed around shrubs
- Closes and attaches to stake with two ties
- Sturdy, vented shelter with 2 ft. height
- Easy access for pruning and weeding
- Stakes sold separately

**Jump Start**

Every design aspect of the Jump Start tree shelter has a single purpose: to get a tree off to a fast, healthy start and shorten the labor-intensive establishment phase of the overall project. The proprietary peach color optimizes red light for increased biomass growth, while the twin-walled construction diffuses light to increase light absorption and photosynthesis.

Jump Start O-Style Shelter

- Sturdy, vented shelter available in 2 ft., 2.5 ft., 3 ft., 4 ft. and 5 ft. sizes
- Ships flat in compact stacks; pops open to solid tube
- All tubes are 3.9 inches in diameter for optimal, consistent growth with balanced root to shoot ratio
- Stakes sold separately

Jump Start C-Style Shelter

- Ships compactly in coiled nest
- Sturdy, vented shelter available in 2 ft. size
- Opens to 3 1/2 inch diameter; attaches to stake with ties
- Easy access to seedlings for weeding and pruning
- Stakes sold separately

Southwest Badger RC&D has over a decade of experience in working with landowners and helping them achieve success in their reforestation efforts. Miracle Tube and Jump Start products were selected over other tree shelters on the market for their proven effectiveness. All of the shelters are designed to last at least four years and include bird netting to prevent cavity nesting bird species from entering the shelters. These shelters overcome many of the problems encountered with earlier tree shelters, some of which led to tree mortality and die back from trees over-heating inside tubes.

"Browsing by white-tailed deer has been a growing problem for Wisconsin landowners planting seedlings for reforestation purposes... The state nurseries shipped over 17 million seedlings, over 80% of which are subject to browsing."

*Wisconsin DNR  
 Governor Knowles  
 -- Forest Study*
